

Course: Web Application Development
with ASP.NET Core

Topic: Introduction to ASP.NET Core
Module 1

Task 1:

Create and run a starting ASP.NET Core app based on ASP.NET Razor Pages. Display the number of the current day of the year on the web page.

Task 2:

Create and run a starting ASP.NET Core app based on ASP.NET Razor Pages. Based on a random value, display any letter from the English alphabet on the web page.

Task 3:

Create and run a starting ASP.NET Core app based on ASP.NET Razor Pages. Add a new page to the starting app. The page should display information about a restaurant. Access to the page should be via a link in the upper menu of the page.

Task 4:

Make the list of restaurants display in Task 2. Use CSS to format the list.

Task 5:

Create and run a starting ASP.NET Core app based on ASP.NET Razor Pages. Add a new page to the starting app. The page must display information about countries. Access to the page should be via a link in the upper menu of the page. Use CSS to format the list.
